**DETAILED ACTION**

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 1-7 and 13 are drawn to physical location and implementation of a capacitive sensor classified in 345/211.

Group 2, claim(s) 8-12 are drawn to a circuit for detecting the time taken to charge a capacitor classified in 324/678.

2. The inventions listed as Groups 1 and 2 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group 1 proposes a special technical feature corresponding to the electrodes of the capacitor being the front electrode and a power terminal. Group 2 proposes a special technical feature of charging the capacitor at two different rates.
3. Groups 1 and 2 do not share any new special technical features nor do they seek to solve the same problem. Additionally, a burden would be upon the examiner as group 1 is drawn toward classification 345, and group 2 is drawn toward classification 324.
